

Product Editions

Selecting the product that is the perfect fit for your project

DC Media Desktop Edition

Single Sign

The perfect starter kit for customers starting out with one display. Ideal for reception areas, menu boards and store front displays. Simply add a display and a PC and you're done.

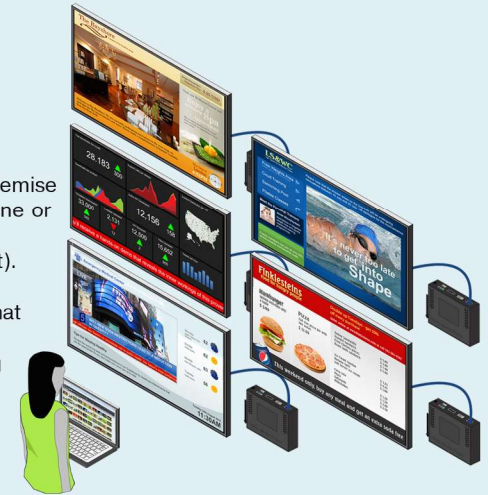

Single Sign can be expanded to a larger network over time simply by adding a network manager and additional players.

Network Package

The network pack is designed for small to medium size on-premise digital signage networks with one or two users and no more than 30 players (recommended limit).

This is a server-less solution that provides all the power and flexibility you need whilst being very easy to use.

DC Media Enterprise Edition

The Enterprise CMS is an on-premise self hosted solution for medium to large size enterprise networks with multiple users. The CMS includes an HTML5 content authoring solution for the browser and supports non-Windows based players such as LG webOS, Samsung SSSP and Android.

The Enterprise CMS is a server product that can be provided on a dedicated server or as a hyper-v image.

DC Media Cloud CMS

The DC Media Cloud hosted CMS is designed for customers who want all the power of the Enterprise CMS but don't want to deploy the required infrastructure.

The cloud hosted CMS is also well suited for customers with locations that are best served over the Internet, such as retail branches and remote satellite offices.

With the cloud hosted CMS you can start small and grow your network over time.
